

## Spreader information

# AccuGreen 3000

## Drop Spreader

### BENEFITS

1. Stable and easy to work with
2. Folding handlebars
3. Hopper capacity: 30 liters
4. Spreader width: 55 cm
5. Exact setting of fertilizer application rates
6. Easy to calibrate

### SPREADER SETTING GUIDELINES

Landscaper Pro	Analysis	Application rate (g/m <sup>2</sup> )	Spreader Setting
Maintenance	24+05+12	35	6.75
Maintenance	20+05+08+2MgO	35	13
New Grass	20+20+08	35	6.75
Stress Control	16+05+22	35	6.75
Stress Control	15+00+25+4MgO	35	13
Pre-Winter	14+05+21+2MgO	45	14.5
All Round	24+05+08+2MgO	45	7.25
Full Season	27+05+05+2MgO	60	12.5 double pass
Weed Control	22+05+05+24D+Dicamba	20	4
Moss Control	18+00+00+Fe	30	5
		40	7
Moss Control	14+00+05+Fe	35	6
Flora	15+08+11+2MgO	-	-
Water Control	H2Pro granule	20	6.25

*The spreader settings are guidelines only. The spreader should be calibrated prior to application to ensure accuracy. The spreader settings are based on a walking speed of 5 km/hour. Walking faster or slower than 5 km/hour will alter the spread width and application rate. Exact rates are dependent upon the spreader itself and the accuracy of the person operating it.*

Growing success

## ASSEMBLY

1. Lay the spreader down so that it rests on the front of the hopper. Lift the stand and brace, then spread the sides of the brace and insert the ends into the holes in the stand.

2. Place the spreader upright on its wheels. Raise the top half of the handle to the upright position and tighten the wing nuts by hand. With our patented locking wing nuts, no tools are needed.

*Note: reverse steps 1 and 2 for convenient, compact storage of your AccuGreen 3000 spreader.*

## HOW TO USE

Set the spreading rate before you begin. For best results, use a Scotts Lawn fertilizer or Grass Seed product.

1. First check the back of your Scotts product package for the proper rate setting number. Some other lawn product manufacturers provide settings for Scotts drop spreaders, but using Scotts products will assure the best possible results.

2. Be sure spreader is turned off (trigger control is away from the handle) by rocking the lock lever (A).

Trigger Control

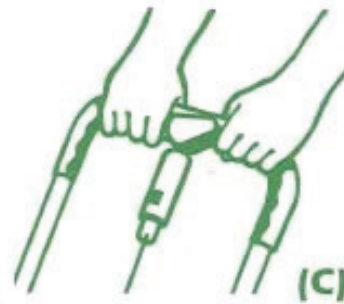

Lock Lever (A)

3. Always fill the spreader on the driveway or path – not on the lawn. Turn the micrometer rate setting barrel (B) until the proper number is visible in the window.

4. Ready? Start walking, then squeeze the trigger to open the spreader (C). You may lock the spreader in the 'on' position by rocking the lock mechanism into place.

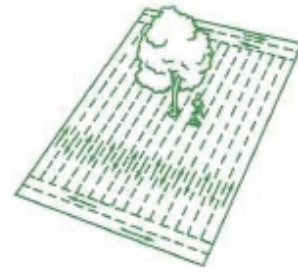

Always push the spreader when applying product. When pulled backward while open, the spreader may apply an excessive amount and damage the lawn.

## RECOMMENDED WALKING PATTERN

Follow these application tips for guaranteed results

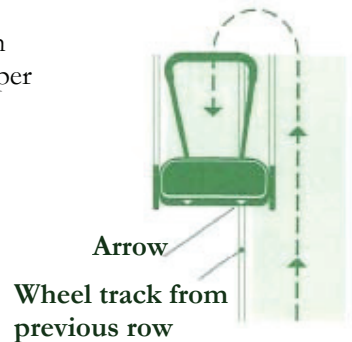

1. If your lawn is rectangular, apply product the longest direction. Apply two header strips across each end for a turning area. Do not leave the spreader open as you turn – shut it off as you reach the end of a strip, then open it as you begin the next one.

2. If your lawn is an irregular shape, apply a header strip completely around it. Then apply product back and forth in the longest direction, shutting off the spreader when you reach the header strip.

3. Avoid 'skips' or missed streaks. This means slightly overlapping each strip over the edge of previous strip by lining up the arrow on the hopper with the wheel track from the previous row. Do not use the wheel for alignment.
