The new generation  
controlled release  
fertilizer

*Growing success*

# SierrablenPlus®

## Meet the new generation Sierrablen

Scotts proudly presents the new generation of Sierrablen®: SierrablenPlus®. Briefly summarized, the amazing properties of the new SierrablenPlus are an improved green-up, a more even colour and an extended longevity.

### Made possible by new coating technology and smaller granules

Applying modern coating technology and making the granules smaller, SierrablenPlus gives you a fertilizer with long-lasting effects that also guarantees the more even and prolonged growth of your grass. Your grass establishes faster, turn a beautiful shade of green and do not require supplementary feeding for a considerable length of time. Which is exactly what you want!

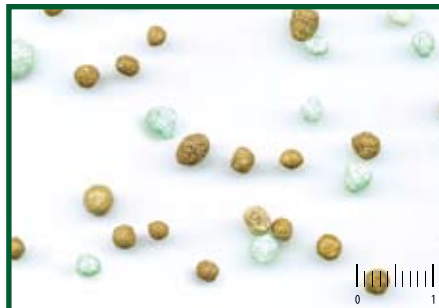

### The advantages of SierrablenPlus

#### Modern coating technology

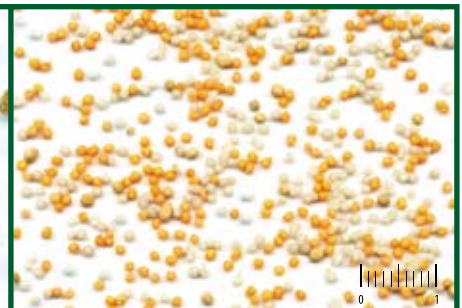

- + grass greens up
- + guaranteed extended longevity
- + homogeneous colour
- + even growth
- + 3 months or 5 months longevity

#### Smaller granules

- + more granules per m<sup>2</sup>
- + suitable for turf mown above 6 mm
- + better distribution when spreading
- + disperses fast into the sward

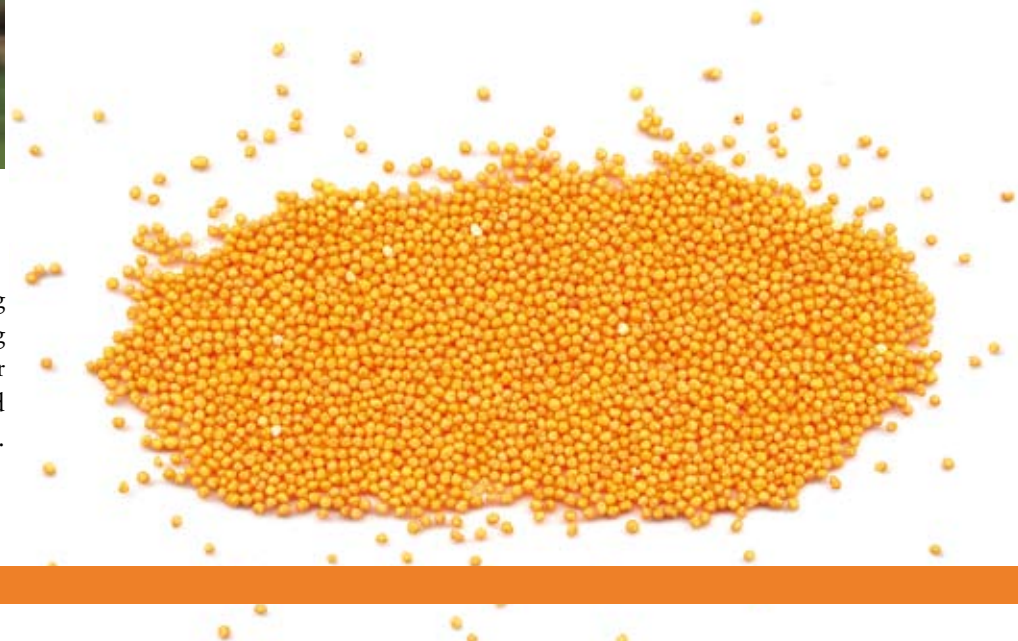

*A larger granule results in an uneven distribution and uneven growth of the grass.*

*A smaller granule leads to an even distribution and ensures even growth and colour, 7,500 granules per m<sup>2</sup>; six times more than standard fertilizer.*

The application of new coating technology guarantees a longer-lasting effect and a fast start. The smaller granule of SierrablenPlus is distributed better and is easily absorbed.

# The results in the field

A digital image enhancement shows the differences clearly. The digital image highlights lighter green and yellow grass caused by poor nutrition.

The result after applying a traditional fertilizer: uneven growth, speckling and an inferior colour.

The result after applying SierrablenPlus: even distribution results in even growth and a more attractive shade of green.

# The right solution for every phase of the season

As a groundsman, you have quite a number of different tasks throughout the year, ranging from preparations in early Spring, through maintenance, management and renovation and regeneration in Spring and Summer, to hardening off your field in the Autumn and Winter period.

Fortunately, you have one constant factor that you can count on all year round: SierrablenPlus.

### More information

If you would like more information about the advantages of SierrablenPlus, ask your Scotts dealer or your contact person at Scotts.
